

Voting screen guide

What to do

As shown in the POLLING PLACE LAYOUT, a polling booth must have a voting screen so that voters can mark their ballot in secret. Using the dimensions indicated here, have a student construct a voting screen from cardboard for use in your Election Simulation.

Ballot box guide

What to do

As shown in the POLLING PLACE LAYOUT, a polling place must have a ballot box. An official ballot box would look something like the image on the right. For your election simulation, you could have a student construct a cardboard replica of this ballot box. A simple box with a slot in the lid for ballots would also work. To make it more like a real election, place a ballot box cover over the slot. This can be a piece of cardboard cut to be about the same size as the top of the ballot box.
